JABALPUR M.P.**

**Approved by Higher Education  
And the Governor of M.P.**

**Faculty of Science  
Scheme & Syllabus**

**For**

**Subject –Physics  
M.Sc. Programme**

**(1 Year PG Diploma/ 1 Year PG/ 2Year PG)**

**Program**

**I to IV Semester**

**2025-26**

**Syllabus**

**M.Sc. Physics**

**Duration: Two Year**

Part A Introduction			
Program: PG	Class: M.Sc.	Year: I(I Sem)	Session: 2025-26
Subject: Physics			
1	Course Code	MPHY0101-T	
2	Course Title	Mathematical Physics	
3	Course Type (Core Course/ Discipline Specific Elective)	Core Course (CC-11)	
4	Pre-requisite (if any)	To study this course, a student must have UG Degree in Physics.	
5	Course Learning outcomes (CLO)	<p>On successful completion of this course, the students will be able to:</p> <ol style="list-style-type: none"> <li>1. Understand the early life, education, and historical context of Aryabhata and Bhaskaracharya II.</li> <li>2. Develop a strong foundation in mathematical methods such as curvilinear coordinates, probability, group theory, special functions, complex analysis and tensor.</li> <li>3. Apply mathematical techniques to solve physics problems, translating real-world situations into mathematical formulations.</li> <li>4. Solve quantitative problems by applying mathematical models to predict or analyse physical behaviour.</li> </ol>	
6	Credit Value	6	
7	Total Marks	Max. Marks: 60+40= 100	Min. Passing Marks: 24+16= 40
Part B- Content of the Course			
Total No. of Lectures (in hours): 90			
Unit	Topics		No. of Lectures (1 hour each)
I	<p><b>Curvilinear Coordinates, probability and Group theory</b></p> <ol style="list-style-type: none"> <li>1. A brief biography of Aryabhata and Bhaskaracharya II with their major contribution to science and society.</li> <li>2. Introduction to Curvilinear Coordinates, Orthogonal curvilinear coordinates, differential of an arc length, differential operators, spherical and cylindrical coordinates and their unit vectors.</li> <li>3. Elementary probability theory, Conditional Probability, Bayes theorem, random variables, binomial, Poisson and normal distributions. Central limit theorem.</li> <li>4. Group theory: Introductory group theory, Special unitary group of degree two SU(2), Special orthogonal group of degree three SO(3).</li> </ol> <p><b>Activity:</b></p> <ol style="list-style-type: none"> <li>1. Ask students for a group discussion on contributions of Indian mathematicians.</li> <li>2. Ask students to make charts on group theory (SU(2), SO(3)).</li> <li>3. Organize debate on historical time units (e.g. Yuga, kalpa) and ask them to convert in modern unit.</li> </ol>		18
II	<p><b>Special Functions</b></p> <ol style="list-style-type: none"> <li>1. Legendre function: Legendre's equation, Legendre's polynomial and its generating function, Recurrence formula, General solution of Legendre equation, Rodrigue's formula, Orthogonality of Legendre Polynomials.</li> </ol>		18

	<ol style="list-style-type: none"> <li>2. Bessel functions: Bessel equation and its solution, Bessel functions <math>J_n(x)</math>, Recurrence formula and generating function, Orthogonality of Bessel function.</li> <li>3. Hermite's Function: Hermite's equation, Generating function of Hermite polynomials, Orthogonal property of Hermite polynomials, Recurrence formula for <math>H_n(x)</math> of Hermite equation.</li> </ol>	
<b>III</b>	<b>Complex Analysis</b> <ol style="list-style-type: none"> <li>1. Introduction to Complex Numbers and their Graphical Representation, Functions of Complex Variables, Analyticity of complex function, Cauchy-Riemann equation,</li> <li>2. Singularities: poles, removable singularity, essential singularity, branch points, Cauchy theorem, Cauchy integral formula, Laurent and Taylor's expansion. Residues and Residue Theorem. Application of Contour Integration in solving Definite Integrals.</li> </ol>	<b>18</b>
<b>IV</b>	<b>Fourier and Laplace transform:</b> <ol style="list-style-type: none"> <li>1. <b>Fourier:</b> Fourier Transforms, Integrals Transforms, Fourier Integral theorem (Statement only), Fourier sine and cosine transform, Fourier transform of single pulse, trigonometric, exponential functions, Fourier transform of derivatives, Inverse Fourier transform, Convolution theorem, Properties of Fourier transforms.</li> <li>2. <b>Laplace:</b> Laplace transforms, Laplace transform of Elementary functions, Properties of Laplace transforms, Change of Scale Theorem, Shifting Theorem, Laplace transforms of derivatives, Derivatives and Integrals of Laplace transforms, Laplace transform of Unit Step function and Periodic Functions, Convolution Theorem, Inverse Laplace transforms, Solution of heat flow along semi-infinite bar using Laplace transform.</li> </ol>	<b>18</b>
<b>V</b>	<b>Tensor Analysis</b> <ol style="list-style-type: none"> <li>1. Tensors- Notations and Conversions, Contravariant tensors, Rank of the Tensors</li> <li>2. Properties of the Tensors e.g. Addition, Subtraction and Product , Contraction, Cartesian tensors and their transformation properties</li> <li>3. Eigen values of second rank tensors, Quotient law, Higher Rank Tensors with examples from piezoelectricity, stiffness and compliance.</li> </ol>	<b>18</b>
<b>Keywords/Tags:</b> Curvilinear Coordinates, generating function, Complex Variables, Laplace transforms, tensors		
<b>Part C-Learning Resources</b>		
<b>Text Books, Reference Books, Other resources</b>		
<b>Suggested Readings:</b> <ol style="list-style-type: none"> <li>1. K. V. Sarma (1997), Aryabhata, National Book Trust, India.</li> <li>2. Boas M. L., "Mathematical Methods in the Physical Sciences", Wiley, Third edition.</li> <li>3. Arfken G.B., Weber H.J., Harris F.E., "Mathematical Methods for Physicists", Elsevier, 7<sup>th</sup> edition.</li> <li>4. Spiegel M.R., "Fourier Analysis", Tata McGraw-Hill, 2004.</li> <li>5. Fokas A. S. &amp; Ablowitz M.J., "Complex Variables", Cambridge Univ. Press, 2011, 8<sup>th</sup> edition.</li> <li>6. Dass H.K. &amp; Verma R., "Mathematical Physics", S. Chand, Eighth Edition.</li> </ol>

Maximum Marks: 100

Continuous Comprehensive Evaluation (CCE): 40 Marks

University Examination: 60 Marks

Internal Assessment: Continuous Comprehensive Evaluation (CCE):	Class Test Assignment/Presentation	20 20 Total Marks = 40
External Assessment:  University Examination:  Time: 3 Hours	Section (A)- Five very short answer question (20 words each) Section (B)- Five short answer question (200 words each) Section (C)- Two long answer question (500 words each)	02 x 05 = 10  05 x 06 = 30  02 x 10 = 20 Total Marks = 60

Part A Introduction			
Program: PG		Class: M.Sc.	Year: I (I Sem)
Session: 2025-26			
Subject: Physics			
1	Course Code	MPHY0102-T	
2	Course Title	Classical Mechanics	
3	Course Type (Core Course/ Discipline Specific Elective)	Core Course (CC-12)	
4	Pre-requisite (if any)	To Study this course a student must have graduation with physics as major or minor subject.	
5	Course Learning outcomes (CLO)	<p>On successful completion of this course, the students will be able to:</p> <ol style="list-style-type: none"> <li>1. Understand the historical background and contributions of C.V. Raman and Meghnad Saha.</li> <li>2. Formulate Lagrange's and Hamilton's equations of motion and understand their applications.</li> <li>3. Apply the variational principle and principle of least action to solve physical problems.</li> <li>4. Define and apply canonical transformations and generating functions.</li> <li>5. Analyze small oscillations and determine normal modes of vibration.</li> <li>6. Understand the motion of rigid bodies.</li> </ol>	
6	Credit Value	6	
7	Total Marks	Max. Marks: 100 (40 + 60)	Min. Passing Marks: 16+24=40
Part B- Content of the Course			
Total No. of Lectures (in hours): 90			
Unit	Topics		No. of Lectures (1 hour each)
I	<p><b>Lagrangian and Hamiltonian Dynamics</b></p> <ol style="list-style-type: none"> <li>1. Historical background and contributions of C.V. Raman (regarding study of elastic vibrations, wave mechanics), Meghnad Saha ionization equation (statistical mechanics, thermodynamics – classical roots).</li> <li>2. Newtonian mechanics of a system of particles, Constraints and their classification, Generalized coordinates, Principle of virtual work, D'Alembert's Principle in generalized coordinates, Lagrange's equation from D- Alembert principle, Generalized Potential, Lagrangian for a charged particle moving in EM field, Application: Single particle in Space, Simple pendulum, Atwood's machine, Bead sliding on rotating wire.</li> <li>3. Generalized momentum and cyclic coordinates, Hamiltonian function and conservation of energy, Hamilton's equations, Hamilton's equations in different coordinate systems.</li> </ol> <p><b>Activities:</b></p> <ol style="list-style-type: none"> <li>1. Ask students to study about Indian scientists and their work related to classical mechanics.</li> <li>2. Poster on evolution from classical mechanics to quantum mechanics.</li> </ol>		18

	3. Organize debate on various contributions of Indian Scientist (MeghnadSaha, C.V. Raman, SatyendraNath Bose, J.C. Bose)).	
<b>II</b>	<b>Central forces and Variational principles</b> 1. Variational principle, Euler-Lagrange's equation from variational principle, Applications: shortest distance between two points and Brachistochrone problem, Deduction of Hamilton principle from D- Alembert principle, Lagrange's equations of motion for Non-Holonomic system and Lagrange's Multipliers, Principle of least action.	<b>18</b>
<b>III</b>	<b>Canonical transformation and Brackets</b> 1. Canonical Transformation, Legendre transformation, Generating functions, Application of canonical transformation. 2. Poisson's Brackets and their properties, Lagrange Brackets and their properties, Invariance of Poisson's Bracket with respect to canonical transformation, Jacobi's Identity, Phase space and Liouville's Theorem.	<b>18</b>
<b>IV</b>	<b>Hamilton- Jacobi formulation and Small oscillation</b> 1. Hamilton- Jacobi equation, Solution by Hamilton- Jacobi method: Harmonic oscillator, Kepler's Problem, Action and angle variables. 2. One-dimensional oscillator, Two coupled oscillators, Normal Coordinates and Normal Modes, Kinetic and potential energy in normal coordinates, General theory of small oscillation, Secular equation and Eigen value equation,	<b>18</b>
<b>V</b>	<b>Non-inertial systems</b> 1. Euler's angles, Infinitesimal rotations as vectors (Angular velocity), Angular Momentum and Inertia tensor. 2. Euler's equations of motion for a rigid body, Torque- free motion of a rigid body, Motion of a heavy Symmetrical top, Gyroscope. 3. Non-inertial Frame of reference, Fictitious Force, Uniformly rotating frames, Coriolis force, Free fall of a body on Earth's Surface.	<b>18</b>
<b>Keywords/Tags:</b> Generalized coordinates, Variational principle, Poisson's Brackets, Hamilton- Jacobi equation, Coriolis force.		
<b>Part C-Learning Resources</b>		
<b>Text Books, Reference Books, Other resources</b>		
<b>Suggested Readings:</b>

## Assessment and Evaluation

<b>Recommended Continuous Assessment Methods-:</b> <b>Maximum Marks: 100</b> <b>Continuous Comprehensive Evaluation (CCE): 40 Marks</b> <b>University Examination: 60 Marks</b>		
<b>Internal Assessment:</b> <b>Continuous Comprehensive Evaluation (CCE):</b>	<b>Class Test</b> <b>Assignment/Presentation</b>	20 20 <b>Total Marks = 40</b>
<b>External Assessment:</b> <b>University Examination:</b> <b>Time: 3 Hours</b>	<b>Section (A)- Five very short answer question (20 words each)</b> <b>Section (B)- Five short answer question (200 words each)</b> <b>Section (C)- Two long answer question (500 words each)</b>	<b>02 x 05 = 10</b> <b>05 x 06 = 30</b> <b>02 x 10 = 20</b> <b>Total Marks = 60</b>

<b>Part A Introduction</b>			
<b>Program: Degree (PG)</b>	<b>Class: M.Sc.</b>	<b>Year:I(I Sem)</b>	<b>Session: 2025-26</b>
<b>Subject:Physics</b>			
<b>1</b>	<b>Course Code</b>	<b>MPHY0101-P</b>	
<b>2</b>	<b>Course Title</b>	<b>Lab - I</b>	
<b>3</b>	<b>Course Type (Core Course/ Discipline Specific Elective)</b>	<b>Core Course (PC-11)</b>	
<b>4</b>	<b>Pre-requisite (if any)</b>	<b>To Study this course a student must have UG degree in physics.</b>	
<b>5</b>	<b>Course Learning outcomes (CLO)</b>	On successful completion of course, students will be able to: 1. Determine the value of Rydberg's constants. 2. Calculate energy loss per cycle (hysteresis). 3. Measure variation of resistivity with temperature. 4. Compare self Inductance of two coils. 5. Calculate the thermoelectric voltage vs temperature.	
<b>6</b>	<b>Credit Value</b>	<b>4</b>	
<b>7</b>	<b>Total Marks</b>	<b>Max. Marks: 100</b>	<b>Min. Passing Marks:40</b>
<b>Part B- Content of the Course</b>			
<b>Total numbers of Lectures - Practical (in hours per week): 02 hours per credit per week</b>			
<b>Unit</b>	<b>Topics</b>		<b>No. of Lectures (Per week in hours.)</b>
<b>1.</b>	Determine the value of Rydberg's constants with the diffraction grating and hydrogen tube.		<b>02 hours per credit per week</b>
<b>2.</b>	To determine the hysteresis loss of a given transformer by CRO.		
<b>3.</b>	To find the maximum power and efficiency of a solar cell.		
<b>4.</b>	Study the temperature dependence of resistivity of a semiconductor and to determine the band gap of the material.		
<b>5.</b>	To verify Fresnel's formula for the reflection of light		
<b>6.</b>	To compare Self-inductance of two coils L1 and L3 with Maxwell Bridge.		
<b>7.</b>	To determine the frequency of an electric tuning fork by Melde's experiment and verify $\lambda^2-T$ law.		
<b>8.</b>	Determination of Lande's 'g' factor of paramagnetic materials using electron spin resonance method.		
<b>9.</b>	To determine the self inductance of a coil by Anderson bridge.		
<b>10.</b>	Study of different thermocouples for temperature measurement.		
<b>Part C-Learning Resources</b>			
<b>Text Books, Reference Books, Other resources</b>			
<b>Suggested Readings:</b>			
1."B.L. Worsnop and H.T. Flint – Advanced Practical Physics for Students"			
2."C.L. Arora – Practical Physics"			
3."V.K. Mehta – Principles of Electronics"			

4. "Ajoy Ghatak – Optics"
5. "Melissinos & Napolitano – Experiments in Modern Physics"
6. "S. O. Pillai – Solid State Physics"
7. "G.F. Knoll – Radiation Detection and Measurement"
8. "S.M. Sze – Physics of Semiconductor Devices"

<b>4</b>	<b>Pre-requisite (if any)</b>	<b>To Study this course a student must have UG degree in physics.</b>	
<b>5</b>	<b>Course Learning outcomes (CLO)</b>	<p>On successful completion of course, students will be able to:</p> <ol style="list-style-type: none"> <li>1. Understand basic principles of optics.</li> <li>2. Analyze dispersion phenomena and evaluate the refractive index variation using Cauchy's dispersion formula.</li> <li>3. Understand the behaviour of light through optical setups, such as prisms, wedges, and interferometers.</li> <li>4. Understand the phenomena of photoelectric effect and blackbody radiation.</li> <li>5. Identify Explore rotational spectrum of iodine vapor.</li> </ol>	
<b>6</b>	<b>Credit Value</b>	<b>4</b>	
<b>7</b>	<b>Total Marks</b>	<b>Max. Marks: 100</b>	<b>Min. Passing Marks:40</b>
<b>Part B- Content of the Course</b>			
<b>Total Number of Lectures (Hours per week): 02 hours per credit per week</b>			
<b>S.N.</b>	<b>Topics</b>	<b>No. of Lectures (Per week in hours.)</b>	
<b>1.</b>	To calibrate of drum of constant deviation spectrograph.	<b>02 hours per credit per week</b>	
<b>2.</b>	To study the variation of refractive index of the material of prism with wavelength and Cauchy's dispersion formula.		
<b>3.</b>	To determine the wavelength of monochromatic light by diffraction at a straight edge.		
<b>4.</b>	To find out the wavelength of the given light source with the help of Michelson interferometer.		
<b>5.</b>	To determine the angle of a given wedge using given laser beam.		
<b>6.</b>	To determine the refractive index of water using hollow prism.		
<b>7.</b>	To determine the Plank's constant using Black Body Radiation and Photo-Detector.		
<b>8.</b>	To determine the absorption lines in the rotational spectrum of Iodine vapour.		
<b>9.</b>	Determination of Wavelength of different colours using LED.		
<b>10.</b>	Photo-electric effect: photo current versus intensity and wavelength of light.		
<b>Part C-Learning Resources</b>			
<b>Text Books, Reference Books, Other resources</b>			
<b>Suggested Readings:</b>			
1. AjoyGhatak – Optics			

2. E. Hecht – Optics
3. B.L. Theraja – Modern Physics
4. Practical Physics by S. P. Singh
5. Advanced Practical Physics for Students by B.L. Worsnop and H.T. Flint

### Part D-Assessment and Evaluation

#### Suggested Continuous Evaluation Methods:

## Assessment and Evaluation

Recommended Continuous Assessment Methods-: Maximum Marks: 100 Continuous Comprehensive Evaluation (CCE): 40 Marks University Examination: 60 Marks		
Internal Assessment: Continuous Comprehensive Evaluation (CCE):	Class Test Assignment/Presentation	20 20 Total Marks = 40
External Assessment:  University Examination:  Time: 3 Hours	Section (A)- Five very short answer question (20 words each) Section (B)- Five short answer question (200 words each) Section (C)- Two long answer question (500 words each)	02 x 05 = 10  05 x 06 = 30  02 x 10 = 20 Total Marks = 60

Part A Introduction			
Program: PG	Class: M. Sc.	Year: I (II Sem)	Session: 2025-26
Subject: Physics			
1	Course Code	MPHY0202-T	
2	Course Title	Advanced Quantum Mechanics	
3	Course Type (Core Course/ Discipline Specific Elective/)	Core Course (CC-22)	
4	Pre-requisite (if any)	To Study this course a student must have graduation with physics as major or minor subject.	
5	Course Learning outcomes (CLO)	<p>On successful completion of this course, students will be able to understand:</p> <ol style="list-style-type: none"> <li>1. The concept of vibrations and sound by vedic philosophy.</li> <li>2. Hilbert space, operators as matrices and Dirac's BRA and KET notations.</li> <li>3. Three - dimensional Schrödinger equation in terms of spherical coordinates and its applications.</li> <li>4. Quantum theory of scattering and scattering amplitude.</li> <li>5. Different approximation methods and their applications.</li> </ol>	
6	Credit Value	6	
7	Total Marks	Max. Marks: 40+60=100	Min. Passing Marks: 16+24=40
Part B- Content of the Course			
Total No. of Lectures (in hours): 90			
Unit	Topics	No. of Lectures	
I	<p><b>Review and formulation of Quantum Mechanics</b></p> <ol style="list-style-type: none"> <li>1. The concept of "Nada Brahma" from Vedic philosophy and its significance in the Indian Knowledge System.</li> <li>2. Introduction of Schrodinger wave equation and wave function, linear vector space, time dependent and time independent vectors, inner product, concept of Hilbert space.</li> <li>3. Operators and wave functions as matrices, unitary transformation: change of basis, Dirac's BRA and KET notations and their properties.</li> <li>4. Linear harmonic oscillator (solution by ladder or algebra method), energy eigenvalue, creation and annihilation operator, matrices for <math>x</math> and <math>P_x</math>.</li> </ol> <p><i>Activities:</i></p> <ol style="list-style-type: none"> <li>1. Organize a group discussion on "How do Indian philosophical ideas like Nada Brahma help us understand the wave nature of reality?"</li> <li>2. Arrange debate on "understanding ancient ideas for scientific concepts like the Schrödinger wave equation or the dual nature of particles".</li> <li>3. Prepare a char on Different Operators and wave functions.</li> </ol>	18	
II	<b>Three - dimensional Schrödinger equation and Angular Momentum</b>	18	

	<ol style="list-style-type: none"> <li>1. Three - dimensional Schrödinger equation in terms of spherical coordinates, Applications for the determination of eigen functions and eigen values: (a) Rigid rotator (free axis and fixed plane), (b) Hydrogen atom.</li> <li>2. Angular momentum operators and its representation in spherical coordinates, commutation relations, eigen values and eigen functions of <math>L_z</math> and <math>L^2</math>.</li> <li>3. Ladder operators and eigen values, Spherical harmonics and its expressions, Spin angular momentum, Pauli's spin matrices.</li> </ol>	
<b>III</b>	<b>Theory of Scattering</b> <ol style="list-style-type: none"> <li>1. Scattering cross section, differential scattering cross section, total scattering cross section, scattering amplitude, relation between scattering cross section and scattering amplitude, quantum theory of scattering.</li> <li>2. Born Approximation, condition for the validity of Born approximation.</li> <li>3. Method of partial waves analysis, optical theorem, phase shift, dependence of phase shift on potential, application: scattering by a perfectly rigid sphere.</li> </ol>	<b>18</b>
<b>IV</b>	<b>Approximation methods</b> <ol style="list-style-type: none"> <li>1. Time-independent perturbation theory for non-degenerate and degenerate systems up to first and second order and its application for He-atom and Stark effect in hydrogen atom.</li> <li>2. Variational (Rayleigh-Ritz) method and its application to the ground state He atom.</li> <li>3. JWKB approximation, condition of validity, connection formulae, probability of penetration of a potential barrier.</li> <li>4. Time dependent perturbation theory (Constant perturbation).</li> </ol>	<b>18</b>
<b>V</b>	<b>Many -electron atoms and Schrödinger relativistic equation</b> <ol style="list-style-type: none"> <li>1. The central field approximation, Thomas-Fermi statistical model, Hartree's method of self-consistent field.</li> <li>2. Klein Gordon equations, probability and current density, Klein Gordon equation in electromagnetic field, Hydrogen atom, shortcomings of Klein Gordon equation.</li> <li>3. Dirac's relativistic equation for free electron, Dirac's matrices, Dirac's equation in electromagnetic field, Hydrogen atom and hyperfine splitting, Negative energy.</li> </ol>	<b>18</b>
<b>Keywords:</b> Schrodinger wave equation, Rigid rotator, Scattering amplitude, Perturbation theory, Klein Gordon equation.		
<b>Part C-Learning Resources</b>		
<b>Text Books, Reference Books, Other resources</b>		
<b>Suggested Readings:</b> <ol style="list-style-type: none"> <li>1. Joachim-Ernst Berendt, The World Is Sound: Nada Brahma</li> <li>2. Ghatak Ajoy and Lokenathan S., "Quantum mechanics (theory and applications)" (6<sup>th</sup> edition)–, McMillan India Ltd.</li> <li>3. Griffiths David J. and Schroeter Darrel F., "Introduction to quantum Mechanics" (Third edition), Cambridge university press.</li> <li>4. Schiff Leonard I., "Quantum mechanics", McGRaw-Hill Book company.</li> <li>5. Satya Prakash, "Adv. Quantum Mechanics" ,KedarNath Ram Nath&amp; Co.</li> <li>6. Rajput B.S., "Adv. quantum mechanics", PragatiPrakashan.</li> </ol>		

7. Agrawal B.K. and Hariprakash, "Quantum Mechanics", Prentie Hall of India, Pvt. Limited, New Delhi.
8. Sakurai Jun John and Napolitano Jim, "Modern Quantum Mechanics", Addison-Wesley, 2011.
9. NouredineZettili, "Quantum Mechanics: Concepts and Applications" Wiley India, 2016

**Part D-Assessment and Evaluation**

**Recommended Continuous Assessment Methods:-**

Maximum Marks: 100

Continuous Comprehensive Evaluation (CCE): 40 Marks

University Examination: 60 Marks

<b>Internal Assessment:</b>	Class Test	20
<b>Continuous Comprehensive Evaluation (CCE):</b>	Assignment/Presentation	20
		Total Marks = 40
<b>External Assessment:</b>	Section (A)- Five very short answer question (20 words each)	02 x 05 = 10
<b>University Examination:</b>	Section (B)- Five short answer question (200 words each)	05 x 06 = 30
<b>Time: 3 Hours</b>	Section (C)- Two long answer question (500 words each)	02 x 10 = 20
		Total Marks = 60

<b>Part A Introduction</b>			
<b>Program:</b> PG	<b>Class:</b> M.Sc.	<b>Year:</b> I(II Semester)	<b>Session:</b> 2025-26
<b>Subject:</b> Physics Practical			
<b>1</b>	<b>Course Code</b>	<b>MPHY0201-P</b>	
<b>2</b>	<b>Course Title</b>	<b>Lab-I</b>	
<b>3</b>	<b>Course Type (Core Course/ Discipline Specific Elective)</b>	<b>Core Course (PC-21)</b>	
<b>4</b>	<b>Pre-requisite (if any)</b>	<b>To Study this course a student must have UG degree in physics.</b>	
<b>5</b>	<b>Course Learning outcomes (CLO)</b>	<p>On successful completion of this course, the students will be able to:</p> <ol style="list-style-type: none"> <li>1. Understand the phonon dispersion in solids.</li> <li>2. Analyze the V-I characteristics of semiconductor diodes.</li> <li>3. Understand the characteristics of digital circuits including flip-flops, adders, and subtractors.</li> <li>4. Determine type of charge carrier of semiconductors using Hall Effect.</li> <li>5. Verify laws of Boolean algebra.</li> </ol>	
<b>6</b>	<b>Credit Value</b>	<b>4</b>	
<b>7</b>	<b>Total Marks</b>	Max. Marks: 100	Min. Passing Marks:40
<b>Part B- Content of the Course</b>			
<b>Total number Practical (in hours per week): 02 hours per credit per week</b>			
<b>S. N.</b>	<b>List of experiments</b>	<b>No. of Lectures (per week)</b>	
<b>1.</b>	Study of phonon dispersion curves of linear mono and diatomic lattice vibrations in crystal.	<b>02 hours per credit per week</b>	
<b>2.</b>	To study the V-I characteristics of a tunnel diode and to determine its negative resistance region.		
<b>3.</b>	Study of photoconductivity of cadmium sulphide (CdS) photo register at constant irradiation and voltage.		
<b>4.</b>	Identification of charge in P-type and N-type semiconductor using Hall effect.		
<b>5.</b>	Study of V-I characteristic curve of UJT and their use as relaxation oscillator.		
<b>6.</b>	Study of V-I characteristic curve of Gunn diode.		
<b>7.</b>	To verify De Morgan's theorem.		
<b>8.</b>	Verification of the truth tables of Half adder circuit.		
<b>9.</b>	Verification of the truth tables of Half subtractor circuit.		
<b>10.</b>	To verify laws of Boolean algebra.		
<b>Part C-Learning Resources</b>			
<b>Text Books, Reference Books, Other resources</b>			
<b>Suggested Readings:</b>			

1. Solid State Electronic Devices, Ben G. Streetman, Sanjay Banerjee for Semiconductor theory, V-I characteristics
2. Electronic Devices and Circuit Theory, Robert L. Boylestad for UJT, Tunnel diode, photoconductivity
3. Electronic Principles, Albert Malvino, David Bates for Practical electronics, diode characteristics.
4. Digital Logic and Computer Design, M. Morris Mano for Flip-flops, adders, subtractors
5. Introduction to Solid State Physics, Charles Kittel for Phonon dispersion, crystal lattice theory

**Suggested equivalent online courses:**

1. <https://vlab.amrita.edu/index.php?sub=59&brch=165>
2. <https://vlab.amrita.edu/?sub=3&brch=81&sim=399&cnt=1>
3. <https://de-iitr.vlabs.ac.in/exp/truth-tables-flip-flops/simulation.html>
4. <https://me-iitr.vlabs.ac.in/exp/gunn-diode/simulation.html>

**Part D-Assessment and Evaluation**

**Suggested Continuous Evaluation Methods:**

<b>Internal Assessment</b>	<b>Marks</b>	<b>External Assessment</b>	<b>Marks</b>
Class Interaction /Quiz	15	Viva Voce on Practical	10
Attendance in the lab	10	Practical Record File	10
Assignments (Charts/ Model Seminar / Rural Service/ Technology Dissemination/ Report of Excursion/ Lab Visits/ Survey / Industrial visit)	15	Table work / Experiments	40
<b>TOTAL</b>	<b>40</b>		<b>60</b>

Part A Introduction			
Program: PG	Class: M.Sc.	Year: I (II Semester)	Session: 2025-26
Subject: Physics			
1	Course Code	MPHY0202-P	
2	Course Title	Lab -II	
3	Course Type (Core Course/ Discipline Specific Elective)	Core Course (PC-22)	
4	Pre-requisite (if any)	To Study this course a student must have UG degree in physics.	
5	Course Learning outcomes (CLO)	<p>On successful completion of course, students will be able to:</p> <ol style="list-style-type: none"> <li>1. Calculate e/m ratio using Zeeman principle.</li> <li>2. Determine Young's modulus and Poisson's ratio.</li> <li>3. Explore optical dispersion and quantify refractive index variation using Cauchy's formula.</li> <li>4. Determine Curie temperature and dielectric constants of ferromagnetic material.</li> <li>5. Study the characteristics of thermistors.</li> </ol>	
6	Credit Value	4	
7	Total Marks	Max. Marks: 100	Min. Passing Marks: 40
Part B- Content of the Course			
Total Number of Lectures (hours per week): 02 hours per credit per week			
S.N.	Topics		No. of Lectures (per week)
1.	Determination of e/m of electron by Zeeman principle using Feby Perot interferometer.		<b>02 hours per credit per week</b>
2.	To determine Young's modulus and Poisson's ratio of a glass plate using Cornu's method of interference.		
3.	To study the variation of refractive index of the material of prism with wavelength and Cauchy's dispersion formula.		
4.	To determine dielectric constant and Curie temperature of ferromagnetic material (BaTiO <sub>3</sub> ).		
5.	Study the characteristic curves of Thermistor.		
6.	Determination of Magnetic Susceptibility of Paramagnetic solution by Quincke's method.		
7.	To generate a sinusoidal waveform using a function generator and measure its frequency and voltage amplitude using a Digital Storage Oscilloscope (DSO).		
8.	To determine the components of circuit using LCR meter.		
9.	Study of different thermocouples for temperature measurement.		
10.	To Compare the capacitances of two condensers by De-sauty's Bridge.		
Part C-Learning Resources			
Text Books, Reference Books, Other resources			

**Suggested Readings:**

9. Advanced Practical Physics, B.L. Worsnop & H.T. Flint for Interference, optical constants
10. B.Sc. Practical Physics, C.L. Arora for All listed experiments
11. Elements of Solid State Physics, J.P. Srivastava for Magnetic susceptibility, dielectric constant
12. Introduction to Electrodynamics, David J. Griffiths for e/m of electron, magnetic fields
13. Engineering Physics Lab Manual, S. P. Singh for Dielectrics, thermistors, bridges
14. Modern Experimental Physics, A.C. Melissinos for Fabry-Perot, Zeeman effect

**Suggested equivalent online courses:**

<b>Part B - Content of the Course</b>			
<b>Total numbers of Lectures - Practical (in hours per week): 02 hours per credit per week</b>			
<b>S.N.</b>	<b>List of experiments</b>	<b>No. of Lectures (per week)</b>	
<b>1.</b>	To Study of ESR.	<b>02 hours per credit per week</b>	
<b>2.</b>	Measurement of stopping potential and determination of Planck's constant.		
<b>3.</b>	Determine e/m by helical method.		
<b>4.</b>	To study astable multivibrator.		
<b>5.</b>	Hall Effect Experiment to determine charge carrier concentration and mobility.		
<b>6.</b>	To study Monostable multivibrator.		
<b>7.</b>	Identification of unknown element from line emission spectra.		
<b>8.</b>	Determination of e/m of Electron by Thomson's Method.		

<b>Part A – Introduction</b>			
<b>Program: PG</b>	<b>Class: M.Sc.</b>	<b>Year: II (III Sem)</b>	<b>Session: 2025-2026</b>
<b>Subject: Physics</b>			
<b>1.</b>	<b>Course Code</b>	<b>MPHY0302-P</b>	
<b>2.</b>	<b>Course Title</b>	<b>Lab-II</b>	
<b>3.</b>	<b>Course Type (Core/Discipline Specific Elective/Generic Elective/Vocational/...)</b>	<b>Core Course (PC-32)</b>	
<b>4.</b>	<b>Pre- requisite (If any)</b>	<b>To Study this course a student must have UG degree in physics.</b>	
<b>5.</b>	<b>Course Learning Outcomes (CLO)</b>	On completion of the course, the students will be able to: 1. Understand concept of quantization of energy levels. 2. Understand temperature dependence of resistivity. 3. Understand the working principle of a GM counter. 4. Study dielectric constant of semiconductor materials. 5. Study of Splitting of Spectral Lines in magnetic field.	
<b>6.</b>	<b>Credit Value</b>	<b>4</b>	
<b>7.</b>	<b>Total Marks</b>	<b>Max. Marks: 100</b>	<b>Min. Passing Marks: 40</b>
<b>Part B - Content of the Course</b>			
<b>Total numbers of Lectures - Practical (in hours per week): 02 hours per credit per week</b>			
<b>S.N.</b>	<b>List of experiments</b>	<b>No. of Lectures (per week)</b>	
<b>1.</b>	To experimentally demonstrate the concept of quantization of energy levels by Franck-Hertz Experiment.	<b>02 hours per credit per week</b>	
<b>2.</b>	To determine band gap by four probe method.		
<b>3.</b>	To determine the resistivity of semiconductors by Four probe Method.		
<b>4.</b>	Study of GM Counter.		
<b>5.</b>	Determining the plateau and optimal operating voltage of Geiger-Muller Counter.		
<b>6.</b>	To determine dielectric constant of Semiconductor material.		
<b>7.</b>	To determine the Hall voltage developed across the sample material.		
<b>8.</b>	Zeeman Effect – Study of Splitting of Spectral Lines.		
<b>9.</b>	To study of characteristics of SCR.		
<b>10.</b>	Study of characteristics of LDR.		

9.	To study Phase shift Oscillator.	
10.	To study Wein Bridge Oscillator.	
<b>Part C-Learning Resources</b>		
<b>Text Books, Reference Books, Other resources</b>		
<b>Suggested Readings:</b>		
1. "Experiments in Modern Physics" – Adrian C. Melissinos & Jim Napolitano		
2. "Practical Physics" – G.L. Squires		
3. "Atomic Physics" – J.B. Rajam		
4. "Physics Lab Manual" – C.L. Arora		
5. "Solid State Physics" – S.O. Pillai		
6. "Electronic Instrumentation and Measurement" – H.S. Kalsi		
7. "Op-Amps and Linear Integrated Circuits" – Ramakant A. Gayakwad

### Part D-Assessment and Evaluation

#### Suggested Continuous Evaluation Methods:

Internal Assessment	Marks	External Assessment	Marks
Class Interaction /Quiz	15	Viva Voce on Practical	10
Attendance in the lab	10	Practical Record File	10
Assignments (Charts/ Model Seminar / Rural Service/ Technology Dissemination/ Report of Excursion/ Lab Visits/ Survey / Industrial visit)	15	Table work / Experiments	40
<b>TOTAL</b>	<b>40</b>		<b>60</b>

Any remarks/ suggestions:

Part A Introduction			
Program:PG		Class: M.Sc	Year:II (IVSem)
Session:2025-26			
Subject:Physics			
1	Course Code	MPHY0401-T	
2	Course Title	Laser and Fiber Optical Communication	
3	Course Type (Core Course/ Discipline Specific Elective/)	Core Course(CC-41)	
4	Pre-requisite (if any)	To Study this course a student must have graduation with physics as major or minor subject.	
5	Course Learning outcomes (CLO)	<p>On successful completion of this course, the students will be able to:</p> <ol style="list-style-type: none"> <li>1. Concept of ancient Indian theory of light.</li> <li>2. Learn about different types of lasers (e.g., He-Ne, Ruby, and Semiconductor) and their key characteristics.</li> <li>3. Understand the Optical Fiber, its types and basic structure.</li> <li>4. Study different optical fiber sources.</li> <li>5. Understand fiber fabrication methods.</li> </ol>	
6	Credit Value	6	
7	Total Marks	Max. Marks:40+60 =100	Min. Passing Marks:16+24= 40
Part B- Content of the Course			
Total No. of Lectures (in hours):90			
Unit	Topics		No. of Lectures
I	<p>Conceptual Ancient Indian Understanding of Light (Tejas) and compare it to modern laser principles. Overviews on Indian Institutes of LASER and fiber optical communication.</p> <p>Introduction Characteristics (Monochromaticity, Directionality, Brightness, Coherence) of a LASER beam, Interaction of radiation with matter(Induced Absorption, Spontaneous Emission, Stimulated Emission), Einstein's A and B coefficients and expression for energy density, LASER Action and the Conditions for LASER action (Population Inversion and Pumping, metastable state), Requisites of a LASER system(Energy Source or Pumping Mechanism, Active medium and Resonant cavity (or) LASER cavity), three and four level Lasers.</p> <p><b>Activity:</b></p> <ol style="list-style-type: none"> <li>1. Prepare a Poster or "From Tejas to Technology: How Ancient India Saw Light".</li> <li>2. Organize a debate on "Compare laser principles (e.g., coherence, stimulated emission) with yogic/dharmic concepts (e.g., dharana, karma, prana)"</li> <li>3. Arrange group discussions on "The Role of Indian Institutes in Advancing Laser Technology."</li> </ol>		18

II	Line shape broadening, Optical Resonance, Longitudinal and transverse modes in laser cavity, Oscillation gain and power output, Q-Switching, Mode locking, pulse shortening. Types and Applications of Lasers: Principles of Ruby, Nd: YAG, He-Ne, CO <sub>2</sub> , Semiconductor and dye Laser, Holography and its applications.	18
III	Optical Fiber, types of optical fibre, Propagation of light in optical Fiber, basic structure and optical path of an Optical Fiber, Acceptance Angle, Numerical Aperture, Modes of Propagation, Attenuation in Optical Fiber, Absorption losses, Bending Losses, Radiation Losses, Pulse Dispersion, Materials Dispersion.	18
IV	Optical Fiber sources: Light Emitting Diode (LED) as a source; Fiber-LED coupling; Bandwidth and Spectral Emission of LED. LASER. Optical fiber cable, fiber joints, splices, couplers and connectors, measurement in optical fibers, attenuation measurement, dispersion measurement, refractive index profile measurement.	18
V	Fabrication Methods for Fiber fabrication, Outside Vapour Phase Oxidation, Vapour Phase Axial Deposition, Double crucible method, Modified Chemical Vapour deposition, <b>Signal Modulation &amp; Demodulation in Optical Fiber Communication:</b> Intensity Modulation of the Analog & Digital Signal, Frequency Modulation (FM), Pulse Width Modulation, Sensitivity of Fiber optic link.	18

**Keywords/Tags: LASER, Monochromaticity, Optical Fiber, Bandwidth, Radiation loss**

Understand the historical contributions of Dr. B. S. Sonde in digital electronics.</li> <li>2. Understanding Number systems and their inter-conversions.</li> <li>3. Understand the characteristics of the ideal OP-Amp.</li> <li>4. Understand the basics of 8085 microprocessor systems.</li> <li>5. Understand the requirements to interface 8085 microprocessors to various peripherals.</li> </ol>	
6	Credit Value	6	
7	Total Marks	Max. Marks:60+40=100	Min. Passing Marks:16+24=40
Part B- Content of the Course			
Total No. of Lectures (in hours):90			
Unit	Topics		No. of Lectures
I	<p><b>Digital Electronics:</b></p> <ol style="list-style-type: none"> <li>1. Indian pioneer of digital electronics :( Dr. B.S. Sonde), Overview of Indian research Institutes in digital electronics.</li> <li>2. Number systems and their inter-conversions, binary addition and subtraction using 2's complement, Codes: BCD (8421), 2412, excess-3, Gray, ASCII, alphanumeric codes, Parity generator and checker.</li> <li>3. Logic gates:Logic gates and De-Morgan'n theorems, Boolean laws, simplification of logic circuits. Fundamental Products: SOP, POS and Karnaugh Maps. Adder,Subtractor, multiplexer and demultiplexer.Flip flops: RS, D, JK, JK master slave flip-flops. Clocked level and edge triggered Flip-flop.</li> </ol> <p><b>Activities:</b></p> <ol style="list-style-type: none"> <li>1. Prepare a poster on " Ancient Indian literature Linked to Digital Electronics: Pingala's Binary System "</li> <li>2. Arrange group discussion on "Indian manufacturers and exporter of basic digital components "</li> <li>3. Prepare a chart on " Number system and their inter conversion"</li> </ol>		18

II	Block diagram of OP-Amp, characteristics of the ideal OP-Amp, OP-Amp Parameters: Input offset voltage, input offset current, Input bias current, CMRR, SVRR, large signal voltage gain, Slew rate, gain band width product, Output resistance, Open loop and closed loop OP-Amp configurations, differential, inverting and non – inverting amplifiers, voltage series feedback amplifier, effect of feedback on closed loop gain, Input and output resistance, bandwidth, total output voltage. Application of OP-Amp: Adder, Subtractor, Integrator and differentiator	18
III	Signal processing elements, DAC weighted resistor network, R-2R ladder network, ADC- Simultaneous, Counter type, Successive Approximation, single and dual slope; ADC and DAC specifications.	18
IV	<b>Microprocessor:</b> Introduction to microprocessor systems, Architecture of 8085, Buses, Registers, Arithmetic logic unit, Trends in microprocessor developments. <b>Microprocessor programming:</b> Assembly and higher level languages, Addressing schemes, Instruction set for 8085, Assembly language programming using data transfer, Arithmetic and logic instructions, Stack and subroutine, Assemblers, Interpreters and Compilers, debugging.	18
V	<b>Microprocessor Interfacing:</b> Interfacing, Dip switches, Seven segment display to 8085, General purpose programmable peripheral IC. 8255, Temperature controller, 8085 Interrupts, Simple examples using SIM and RIM instructions. <b>Data Communication:</b> Basic concepts transmission format, Error Checks, Data Communication over telephone line), Standards in serial I/O. Software controlled serial I/O. 8085 SID and SOD lines.	18
<b>Keywords/Tags: Diodes, Number system, Solar cells, LED, Flipflop.</b>

---------------------------------------------------------------------------------------------------------------------------------------------------------------------------

<p><b>Recommended Continuous Assessment Methods-:</b>  Maximum Marks: 100  Continuous Comprehensive Evaluation (CCE): 40 Marks  University Examination: 60 Marks</p>		
Internal Assessment:	Class Test	20
Continuous Comprehensive Evaluation (CCE):	Assignment/Presentation	20
		Total Marks = 40
External Assessment:	Section (A)- Five very short answer question (20 words each)	02 x 05 = 10
University Examination:	Section (B)- Five short answer question (200 words each)	05 x 06 = 30
Time: 3 Hours	Section (C)- Two long answer question (500 words each)	02 x 10 = 20
		Total Marks = 60

4.	To obtain velocity profile of flow in a pipe and verify Poiseuille Formula using He-Ne LASER.
5.	To determine wavelength of LASER beam by diffraction grating using spectrometer.
6.	Study of Amplitude Modulation & Demodulation.
7.	Study of Frequency Modulation & Demodulation
8.	Measurement of optical power using optical power meter.
9.	To study the characteristics of loudspeaker system.
10.	To determine the numerical aperture (NE) of optical fibres.
